Seattle, WA

PROFILE

Software engineering leader with 8+ years of experience in data intensive web applications and distributed systems.

EXPERIENCE

Engineering Manager, DefenseStorm — 2019-2025

As an Engineering Manager at DefenseStorm I lead teams in the Threat Surveillance and Fraud Detection spaces. By refining agile methodologies and the SDLC I increased developer velocity by more than 30%, and cut the Change Failure Rate in half. I lead projects that saved hundreds of thousands of dollars per year on Cloud costs, and that significantly decreased the false positive rate of alerts. Most recently I was in charge of gathering and reporting development metrics, and spearheading the push to modernize development with AI tools. I strive to build A+ teams that move quickly and are focused on availability, maintainability, and stability.

Full Stack Software Engineer, DefenseStorm — 2017-2019

As a Full Stack Engineer I designed and implemented features that touched every part of the application, from the UI to the data layer. Memorable projects include modernizing the reporting feature, thereby reducing report generation from minutes to seconds; reducing alert noise by adding schedules; and a major frontend framework migration.

EDUCATION

University of Washington, Bothell — Bachelor of Science in Computer Science and Software Engineering (CSSE)

GPA 3.78 | Cum Laude

SKILLS

Management

Agile methodologies, Kanban, team building, project management

Engineering

Java, Python, Javascript, Typescript, SQL, Angular, Elasticsearch, PostgreSQL, AWS, Linux, git, vim, Cursor, Claude Code

INTERESTS

I like coffee, playing go, and riding old steel bicycles
